

Plane Geometry

Pair of straight lines

show that the equation $bx^2 - 2hxy + ay^2 = 0$
represents a pair of straight lines
which are at right angles to the
pair given by $ax^2 + 2hxy + by^2 = 0$

Sol.

Given eq. is $ax^2 + 2hxy + by^2 = 0$ — (1)

Let eq. (1) represents $y = m_1x$ — (ii) and $y = m_2x$ — (iii)

$$m_1 + m_2 = -\frac{2h}{b} \quad \text{--- (iv)}$$

$$m_1 m_2 = \frac{a}{b} \quad \text{--- (v)}$$

Now eq. is lines \perp to (i) and (ii) are

$$y = \frac{-1}{m_1} x$$

$$y = \frac{-1}{m_2} x$$

$$m_1 y + x = 0$$

$$m_2 y + x = 0$$

Joint eq. is

$$(m_1 y + x)(m_2 y + x) = 0$$

$$m_1 m_2 y^2 + m_1 xy + m_2 xy + x^2 = 0$$

$$m_1 m_2 y^2 + (m_1 + m_2) xy + x^2 = 0$$

$$\left(\frac{a}{b}\right)y^2 + \left(-\frac{2h}{b}\right)xy + x^2 = 0 \quad \left[\begin{array}{l} \text{from (iv)} \\ \text{and (v)} \end{array} \right]$$

$$ay^2 - 2hxy + bx^2 = 0$$

which is the required eq.

Hence proved.
